

Disease Management Initiatives

At Crescent Home Health Agency our philosophy is “*Bringing Living Back to Life*” and we are dedicated to improving the knowledge, health, and independence of our patients through quality home health care.

Crescent Home Health Agency’s patient care goals are reducing hospital re-admission (in turn reducing costs) and helping patients safely transition from facility to home. At Crescent we believe that patient compliance is key to achieving our care goals. To increase patient compliance and improve outcomes, Crescent educates our patients and their caregivers on Disease Management in home care.

Based on Crescent’s commitment to patient care goals and providing quality skilled home care, we are implementing Disease Management initiatives. Crescent Home Health Agency is utilizing the following initiatives for Disease Management in home care:

- a. **Diabetes Zones for Management.**
- b. **COPD Action Plan (American Lung Association).**
- c. **Cardiac Survival Skills Checklist (American Heart Association).**
- d. **CHF Zones for Management.**

For more information regarding Crescent Home Health Agency’s Disease Management Initiatives please contact the Clinical Director, Natalie Huffman RN at 618-277-0939.
